PROFILE SUMMARY

Ambitious Software Engineering undergraduate with strong skills in frontend and backend development, combined with a passion for UI/UX design. Proficient in Java, JavaScript, and modern web technologies, with hands-on experience creating responsive interfaces, intuitive user experiences, and robust server-side applications.

Skilled in wireframing, prototyping, Figma design, database management, and API integration. Committed to delivering user-centered, efficient, and scalable software solutions while continuously growing as a full-stack developer with a focus on elegant and engaging design.

EDUCATIONS

Graduate Diploma in Software Engineering (GDSE)
Institute of Java Software Engineering (IJSE), Sri Lanka

Feb 2024 – Present

- Engaged in a comprehensive software engineering program emphasizing full-stack development
- Acquiring hands-on skills in Java programming, data structures, algorithms, and relational databases (SQL)
- Learning modern web frameworks, design patterns, and best practices for building maintainable and scalable software

ADDITIONAL EDUCATIONS

- **Languages:** Java, Python, JavaScript, TypeScript, SQL, HTML5, CSS3
- **Frontend:** React.js, React Native, Expo, Tailwind CSS, Bootstrap, Responsive Web Design
- **Backend:** Node.js, Express.js, Spring Boot, REST APIs, Microservices, Server-Side Development
- **Databases:** MySQL, MongoDB
- **UI/UX Tools:** Figma, Wireframing, Prototyping, User-Centered Design

PROJECTS

PLANTS CARE APPLICATION | Individual Project

Feb 2026

A mobile application designed to help plant owners monitor and manage their plants efficiently, providing **care reminders, tracking features**, and a visual **plant database**.

- Developed a **cross-platform mobile application** using **React Native (Expo)** and **TypeScript** to track and manage plant care.
- Implemented **Firebase Authentication** and **Firestore** to securely manage **user and plant data**.
- Integrated **push notifications** and reminders for **watering schedules** and **plant care tracking**.
- Utilized **Cloudinary** for optimized **image storage** and delivered a responsive, user-friendly interface using **Tailwind CSS** and **Context API**.

EVENT PLANNING & BOOKING SYSTEM | Individual Project

Dec 2025

A **backend RESTful API** for Eventora, a full stack event planning and management platform that enables users to **create events, book vendors, manage budgets**, and handle **role-based access**.

- Built secure, **role-based REST APIs** using **Node.js, Express.js, TypeScript, MongoDB, JWT authentication**, and **Mongoose**.
- Implemented **user authentication** (with **access & refresh tokens**), **vendor management, event scheduling, booking**, and **budget endpoints**.
- Enabled **file uploads** for event/vendor images using **Multer** and automated **email notifications** via **Nodemailer**.
- Structured the backend with **modular controllers, middleware**, and **secure environment configurations** for scalable deployment.

A **full stack RESTful API** and **web platform** that connects customers with service providers for home services (e.g., plumbing, electrical, woodwork). Built with **Spring Boot** and **Java**, the system supports **user roles** (CUSTOMER, PROVIDER, SUPER_ADMIN), **job posting/booking**, **notifications**, and admin dashboards.

- Developed **backend REST APIs** using **Spring Boot**, **Java**, **Spring Security**, **JWT authentication**, and **MySQL** for secure data management.
- Implemented **role-based access** control, customer/provider workflows, job posting, status updates, and admin management features.
- Integrated **file uploads** and **profile management**, **in-app notifications**, and **email alerts** for user actions and updates.
- Designed **frontend pages** with **HTML**, **CSS**, **JavaScript** and connected UI to **backend REST endpoints** for interactive dashboards and real-time actions.

A **web-based Point of Sale (POS) application** designed for cafe operations to manage sales, menu items, and customer orders efficiently. Built using **HTML**, **CSS**, and **JavaScript** with a focus on responsive design and usability.

- Developed **responsive POS UI screens** (login, dashboard, menu, order, item management) using **semantic HTML** and **JavaScript**.
- Implemented interactive workflows for **order placement**, **inventory management**, and **daily sales tracking**.
- Applied **front-end logic** for **form validation**, **state management**, and **dynamic content rendering** to simulate real cafe operations.
- Created **wireframes** and **prototypes** to plan **user flows** and optimize **interface usability**.
- Designed **clean, intuitive layouts** with **CSS**, ensuring a user-friendly experience aligned with real-world POS systems.

A **responsive personal portfolio website** to showcase skills, projects, and professional background, designed for **web** and **mobile screens**. Created **wireframes** and **interactive prototypes** in **Figma** to plan layout, navigation, and user interactions before development. Built with **HTML**, **CSS**, and **JavaScript**, the site highlights project case studies, contact functionality, and a modern UI.

- Developed a **clean, responsive UI** using **semantic HTML**, **CSS layouts**, and modern design principles.
- Designed interactive sections for skills, projects, about, and contact based on **wireframes** and **prototypes** to improve usability.
- Implemented smooth navigation and animations with **JavaScript** for enhanced user experience.
- Ensured **mobile-first design** so the portfolio functions seamlessly across devices.
